Art Unit: 2827

DETAILED ACTION

1. Amendment filed on 07/07/2005 has been entered.

2. Claims 1-10, 13-19 are presented for examination.

Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Objections

4. Regarding claim 2, lines 7-8, should be change "common nodes " to –common node--.

Claim Rejections - 35 USC § 102

- 5. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:
 - (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6. Claims2-4,7-10,15-19 are rejected under 35 U.S.C. 102(b) as being anticipated by McClure et al. (U.S. Patent no. 6,812,734).

Regarding claims 2-4, 7-10, 15-19, McClure et al. discloses an output buffer circuit (Figure 1) comprising:

a plurality of unit circuits (200, 220) in each of which a pull-up transistor (16) controlled by a an input signal (INo) are connected in series between a high-potential

Application/Control Number: 10/721,310

Art Unit: 2827

power supply (Vcc) and common node (Figure 1), and a plurality of pull-down transistors (18) controlled by an input signal (DIS_) are connected in series between the common node and a low-potential power supply (Figure 1), and output terminal connected to a common connecting point of the common node of the plurality of unit circuit (Figure 1, circuits 20, 22 connected at D₀), first resistors formed respectively between the common node of the plurality of unit circuits and the common connecting point (first resistors in Figure 1 are 12₀ and 14₀, as disclosed in claims 10, the resistors can be a transistor). More specifically, McClure et al. disclose second resistors (R1₀, R2₀) formed respectively between the high-potential power supply and pull-up transistor and between the pull-down transistor and low-power supply in each of the plurality of unit circuits, and the plurality of first resistors formed between the common node and output terminal have the same resistance (*transistors 12₀*, 14₀ are the same and they are selected from the group elements as defined in claim 10 of present application), and the pull-up and pull-down transistors are transistors (Figure 1, 16, 18).

Allowable Subject Matter

7. Claims 5-6 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 5-6 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. McClure et al. (U.S. Patent No. 5,099,148), and others, does not

Art Unit: 2827

teach the claimed invention having a third transistors formed respectively between the pull-up transistors and common node and between the common node and pull-down transistors.

8. Claims 1, 13-24 are allowed.

Claims 1, 13-14 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. McClure et al. (U.S. Patent No. 5,099,148), and others, does not teach the claimed invention having a plurality of unit circuits in each of which a pull-up transistor controlled by a first input signal is connected between a high-potential power supply and common node, and a first pull-down transistor controlled by a second input signal and a second pull-down transistor controlled by a third input signal are connected in series between said common node and a low-potential power supply as claim 1 discloses, and third transistors formed respectively between the pull-up transistors and common node and between the common node and pull-down transistors as claims 13-14 disclosed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thong Q. Le whose telephone number is 571-272-1783.

The examiner can normally be reached on 8:00am-5:00pm M-F.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Hoai V. Ho can be reached on 571-272-1777. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
